

Assignment Test Example

Introduction

This project aims to streamline the psychology marking process by creating a digital rubric system. Current manual grading is inefficient, inconsistent, and prone to error. By implementing an online platform, markers will have clear grading criteria, automated scoring, and reduced administrative overhead. This ensures fairness for students and efficiency for staff.

Feature 1: Rubric Upload

The system allows coordinators to upload course rubrics directly into the platform. Each rubric entry is automatically structured into categories and criteria, ensuring that all markers evaluate students against the same standards. For example, when uploading a PDF rubric, the system converts it into structured fields, enabling consistency and traceability across all assignments.
